

Build Script (Team1)

Amith Ramanagar Chandrashekar Pooja Himanshu Oza
Rachel E Cates Ahmed M Alnazer

January 2019

1 Dependency

Java version: Java8 or Higher

Build Tool: Maven

2 How to Run

Please perform the below steps

- `sudo git clone https://gitlab.cs.unh.edu/cs953-2019/cs953-team1.git`
- `cd cs953-team1`
- `./install.sh`

Running the `./install` creates two run files one for page level a and another one for section level query. `trec_eval` can be used to get the MAP and Rprec score. The `trec_eval` binary is located at `"/home/team1/trec_tool/trec_eval"`

Note: If necessary please change the permission of the folder `cs953-team1` and `install.sh` using `chmod 777 Dir-path`

Note: `sudo ./install.sh` also takes in two arguments, first one is indexed location and the second argument is cbor outline file, if no argument is passed, it will call the jar files by passing the path to index location and outlines files (**Recommended**).

Example `"sudo ./install.sh ../indexed_file/
../query_data/benchmarkY1/benchmarkY1-train/train.pages.cboroutlines.cbor"`
